Management Information System
Paper Code: BCAMISEO501T24

Course outcomes:
At the completion of the course, a student will be able to:

1. Relate the basic concepts and technologies used in the field of management information systems. Compare the processes of developing and implementing information systems.
2. Outline the role of the ethical, social, and security issues of information systems.
3. Translate the role of information systems in organizations, the strategic management processes, with the implications for the management.
4. Apply the understanding of how various information systems like DBMS work together to
5. Accomplish the information objectives of an organization.

UNIT – I

Meaning and role of MIS: Introduction to MIS, definition & characteristics of MIS, Components of MIS, Nature & Scope of MIS, MIS organization within the company. Management, organizational theory & systems Approach: Development of organization theory, management & organizational behavior, management, information, and the systems approach. Introduction to system and Basic System Concepts, Types of Systems Information System: Definition & Characteristics, Types of information, Role of Information in Decision-Making, Sub-Systems of an Information system: EDP and MIS Levels of Management TPS/MIS/DSS.

UNIT – II

Information Systems for Decision making: Evolution of an Information System, Basic information systems, Decision making & MIS, Types of decisions--Structured Vs Unstructured decisions, Strategic , tactical & operational information for taking decisions, Simon's model of decision-making. MIS as a technique for making programmed decisions, decision assisting information systems.

UNIT – III

Strategic and project planning for MIS: General business planning, appropriate MIS response, MIS planning – general, MIS planning – details. Conceptual Design – Definition of the problem, system objective and system constraints, analysis of information source, alternative system design and selection of optimal system, conceptual system designs document.

UNIT – IV

Detailed System Design: Inform & Involvement of end user, aim of detailed design, project management, identification & trade-off criteria, defining subsystems, degree of automation of each operation, inputs, outputs & processing, early system testing, software, hardware & tools, documentation, Role of Top management during design.

UNIT – V

Implementation, evaluation and maintenance of the MIS: Plan the implementation, acquire floor space and plan space layouts, organize for implementation, develop procedures for implementation, train and operating personnel, computer-related acquisitions, develop forms for data collection and information, dissemination, develop the files, test the system, cut over, document the system, evaluate the MIS, control and maintain the system. System maintenance: Corrective, Adaptive &

perfective maintenance. Pitfalls in MIS: Fundamental weaknesses. Functional MIS: A Study of Marketing, Personnel, Accounting MIS.
